

QUARTERLY FACT SHEET

31 December 2016

DORIC NIMROD AIR TWO LIMITED

LSE: DNA2

The Company

Doric Nimrod Air Two Limited (“the Company”) is a Guernsey domiciled company, which was listed on the Specialist Fund Segment (SFS) of the London Stock Exchange’s Main Market on 14 July 2011 with the admission of 72.5 million Ordinary Shares at an issue price of 200p per share. On 27 March 2012, the Company issued 100,250,000 C Shares at 200p per share. With effect from 6 March 2013 C Shares were converted into Ordinary Shares. One Ordinary Share has been received for every one C Share, resulting in 172,750,000 Ordinary Shares in total. The market capitalisation of the Company was GBP 376.6 million as of 31 December 2016.

The Company has four wholly-owned subsidiaries: MSN077 Limited, MSN090 Limited, MSN105 Limited and Doric Nimrod Air Finance Alpha Limited (“DNAFA”).

The Company acquired a total of seven Airbus A380-861 aircraft between October 2011 and November 2012. Each aircraft is leased to Emirates Airline (“Emirates”) - the national carrier owned by the Investment Corporation of Dubai, based in Dubai, United Arab Emirates - for an initial term of 12 years from the point of delivery, with fixed lease rentals for the duration. In order to complete the purchase of the first three aircraft, MSN077 Limited, MSN090 Limited and MSN105 Limited entered into three separate loans, each of which will be fully amortised with quarterly repayments in arrear over 12 years.

The net proceeds from the C Share issue (“the Equity”) were used to partially fund the purchase of four of the seven Airbus A380s. In order to help fund the acquisition of these final four aircraft, DNAFA issued two tranches of enhanced equipment trust certificates (“the Certificates” or “EETC”) - a form of debt security - in June 2012 in the aggregate face amount of USD 587.5 million. DNAFA used the proceeds from both the Equity and the Certificates to finance the acquisition of four new Airbus A380 aircraft leased to Emirates.

Investment Strategy

The Company’s investment objective is to obtain income returns and a capital return for its shareholders by acquiring, leasing and then selling a portfolio of aircraft. The Company receives income from the leases and its directors are targeting a gross distribution to the shareholders of 4.5 pence per share per quarter (amounting to a yearly distribution of 9.0% based

on the initial placing price of 200p per share). It is anticipated that income distributions will continue to be made quarterly.

The total return for a shareholder investing today (31 December 2016) at the current share price consists of future income distributions during the remaining lease duration and a return of capital at dissolution of the Company. The latter payment is subject to the future value and the respective sales proceeds of the aircraft, quoted in US dollars and the USD/GBP exchange rate at that point in time. Since launch three independent appraisers provide the Company with their future values for the aircraft at the end of each financial year. The latest appraisals available are dated the end of March 2016. The table below summarizes the total return components, calculated on different exchange rates and using the average value of the aircraft as provided by the three independent external appraisers. Regarding the following two tables, there is no guarantee that the aircraft will be sold at such a sale price or that such capital returns would be generated. It is further assumed that the lessee will honour all its contractual obligations during the entire anticipated lease term.

The contracted lease rentals are calculated to satisfy interest and principal in US dollars and distributions and Company running costs in sterling. The Company is therefore insulated from foreign currency market volatility during the term of the leases.

I. Implied Future Total Return Components Based on Appraisals¹

The implied return figures are not a forecast and assume the Company has not incurred any unexpected costs.

Asset Manager's Comment

1. The Assets

In November 2012, the Company completed the purchase of all seven Airbus A380 aircraft bearing manufacturer's serial numbers (MSN) 077, 090, 105, 106, 107, 109 and 110. All seven aircraft are leased to Emirates for an initial term of 12 years from the point of delivery with fixed lease rentals for the duration.

The seven A380s owned by the Company recently visited Amsterdam, Auckland, Bangkok, Brisbane, Copenhagen, Frankfurt, Guangzhou, Hong Kong, London Heathrow, Manchester, Melbourne, New York JFK, Paris, Perth, Prague, Rome, Shanghai, Singapore, Sydney, and Zurich.

Aircraft utilisation for the period from delivery of each Airbus A380 until the end of November 2016 was as follows:

Aircraft Utilization

MSN	Delivery Date	Flight Hours	Flight Cycles	Average Flight Duration
077	14/10/2011	24,142	2,829	8 h 30 min
090	02/12/2011	21,409	3,568	6 h
105	01/10/2012	18,206	2,971	6 h 10 min
106	01/10/2012	20,133	2,311	8 h 45 min
107	12/10/2012	19,856	2,300	8 h 40 min
109	09/11/2012	17,275	2,795	6 h 10 min
110	30/11/2012	17,651	2,961	6 h

Maintenance Status

Emirates maintains its A380 aircraft fleet based on a maintenance programme according to which minor maintenance checks are performed every 1,500 flight hours, and more significant maintenance checks (C checks) at 24 month or 12,000 flight hour intervals, whichever occurs first. Emirates bears all costs (including for maintenance, repairs and insurance) relating to the aircraft during the lifetime of the lease.

Inspections

Doric, the asset manager, performed inspections of MSNs 107 and 110 in November 2016. The physical condition of each aircraft was in compliance with the provisions of the respective lease agreements. MSN 090 was inspected in December 2016. The final report for this aircraft was not available at the editorial deadline.

In November 2016 Doric also undertook records audits for MSNs 109 and 110. The lessee was again very helpful in the responses given to the asset manager's technical staff and the technical documentation was found to be in good order.

2. Market Overview

Between January and October 2016 passenger demand, measured in revenue passenger kilometres (RPKs), increased by 6.0% compared to the same period the year before. Adjusted for the extra day as 2016 is a leap year, traffic grew by 5.7%. Growth remains broadly in line with its ten-year-average, driven by a range of competing factors. The impact of terrorist attacks and political instability in parts of the world has eased and global business confidence has picked up over the last few months. However, the International Air Transport Association (IATA) expects that lower oil prices and airfares, the key driver of demand in recent years, might be a thing of the past as OPEC recently agreed on restricting oil supplies. In the latest report on the economic performance of the airline industry released in December, IATA expects an RPK growth of 5.9% in 2016 and 5.1% in the coming year.

During the first ten months of 2016 passenger load factors averaged 80.5%, down by 0.2 percentage points compared to the same period the year before. With minus 2.1 percentage points, the Middle East recorded the strongest decline in load factors as the added capacity outstripped brisk demand significantly. IATA estimates an average worldwide passenger load factor of 80.2% for this year and 79.8% for 2017.

A regional breakdown reveals that Middle East airlines, including Emirates, continued to outperform the overall market demand again this year. Between January and October RPKs increased by 11.0% compared to the previous period. Asia/Pacific-based operators ranked second with 8.9%, followed by Africa with 6.6%. Europe grew by 3.8%. Latin American and North American market participants recorded RPK growth of 3.6% and 3.2% respectively.

Fuel is the single largest operating cost of airlines and has a significant impact on the industry's profitability. According to its latest report released in December, IATA expects an average fuel price of USD 52.1 per barrel in 2016. This would be 22% lower compared to the previous year. Jet fuel prices have started to rise with oil prices and IATA forecasts an average price of USD 64.9 per barrel of jet fuel for 2017. Fuel costs in 2017 are set to represent 18.7% of average operating costs, a 0.5 percentage point reduction from 2016. This is significantly below the recent peak of 33.2% in 2012-13. Slower GDP growth and rising costs have led to a downward revision of IATA's 2016 airline industry profitability to USD 35.6 billion. This will still be the highest absolute profit generated by the airline industry and the highest net profit margin (5.1%) to date. For 2017 Alexandre de Juniac, IATA's Director General and CEO, expects a "very soft landing" with an industry net profit of USD 29.8 billion.

3. Lessee – Emirates Key Financials

In the first half of the 2016/17 financial year ending on 31 March 2017 Emirates made a net profit of USD 214 million – a decrease of 75% compared to the same period in the previous year. The net profit margin was 1.9%. Revenue for the period reduced slightly by 1% to USD 11.4 billion. During the report period Emirates experienced an unfavourable currency environment. The US dollar continued to strengthen against most other major, revenue-generating currencies and increased competition resulted in lower average fares. Referring to the macroeconomic situation Emirates Group Chairman and Chief Executive, His Highness (HH) Sheikh Ahmed bin Saeed Al Maktoum, said: "The bleak global economic outlook appears to be the new norm, with no immediate resolution in sight."

Emirates' operating costs significantly benefited from the lower oil price. Fuel costs were on average 10% lower compared to the same period last year. The share of operating costs, compared with the first six months of last year, decreased from 28% to 24%. Emirates' total operating costs increased by 5% against the overall capacity increase of 9%.

As of 30 September 2016, the balance sheet total amounted to USD 30.9 billion, a decrease of 5% compared to the beginning of the financial year. Total equity increased by 4.6% to USD 9.2 billion with an equity ratio of 29.9%. The current ratio stood at 0.77, meaning the airline would be able to meet about three-quarters of its current liabilities by liquidating all its current assets. Significant items on the liabilities side of the balance sheet included current and non-current borrowings and lease liabilities in the amount of USD 12.4 billion. As of 30 September 2016, the carrier's cash balance was USD 3.2 billion, down by

USD 2.2 billion compared to the beginning of the financial year. This also included the repayment of two bonds in the total amount of more than USD 1.1 billion.

During the first half of the 2016/17 financial year Emirates continued to increase its capacity for passengers (measured in ASK) by 12%. At the same time the airline recorded 8% more RPKs than in the same period the previous year. As a result, the passenger load factor dropped by 3 percentage points to 75.3%. This key indicator is almost identical to the average passenger load factor in the Middle East of 75.4%. Emirates carried 28 million passengers between 1 April and 30 September 2016, 9% up from the same period last year.

Between April and September 2016 the airline received 16 wide-body aircraft with 20 more scheduled to be delivered before the end of the financial year. At the same time 19 older aircraft had been removed from the fleet by the end of September, with a further 8 to be returned by the end of March 2017. Having retired its last Airbus A330/A340s in November 2016, Emirates only operates Airbus A380s and Boeing 777s. New aircraft types, such as the Airbus A350 and the Boeing 787, will not join the fleet before 2021/22, said Tim Clark, President of Emirates.

Emirates made use of the additional capacity by expanding its global route network and launched passenger services to four new destinations in Asia (Hanoi, Yangon, Yinchuan and Zhengzhou). As of 30 September 2016, Emirates' global network spanned 155 destinations in 82 countries.

In December 2016 the Emirates Group released its 6th Annual Environmental Report covering the 2015/16 financial year. Airline operations constitute the main environmental impact of the Emirates Group. Emirates has one of the youngest aircraft fleets in the industry: the aircraft have an average age of just 74 months compared to the industry average of 140 months. This modern wide-body fleet delivers environmental benefits with regards to lower engine and noise emissions. During the period under review Emirates' fleet achieved a passenger fuel efficiency of 4.2 litres per 100 RPKs compared with 3.99 litres in the previous period. This number was adversely impacted by instabilities in many parts of the world including Ukraine, Syria, Iraq and Yemen. Flights that would normally transit these regions were re-routed to avoid conflict zones leading to increased fuel consumption for these flights. Emirates is committed to redoubling its efforts during the current financial year, looking at all aspects of its operations including the continuing cooperation with authorities and air traffic management providers to ensure that the most fuel-efficient flight paths can be utilized.

4. Aircraft – A380

By mid-December 2016 Emirates operated a fleet of 88 A380s which currently serve 44 destinations from its Dubai hub: Amsterdam, Auckland, Bangkok, Barcelona, Beijing, Birmingham, Brisbane, Christchurch, Copenhagen, Doha, Dusseldorf, Frankfurt, Guangzhou, Hong Kong, Jeddah, Kuala Lumpur, Kuwait, London Gatwick, London Heathrow, Los Angeles, Madrid, Manchester, Mauritius, Melbourne, Milan, Moscow, Mumbai, Munich, New York JFK, Paris, Perth, Port Louis, Prague, Rome, San Francisco, Seoul, Shanghai, Singapore, Sydney, Taipei, Toronto, Vienna, Washington, and Zurich. From

30 October 2016 Emirates upgraded its Dubai to Christchurch route from a Boeing 777-300ER to an Airbus A380. The removal of the en-route stop in Bangkok enables passengers to travel all the way between Christchurch and Dubai with just one stop in Sydney, reducing the journey time by about two hours in each direction. On 1 December 2016 Emirates upgraded one of the nine daily flights between Dubai and Doha to an A380 service. It is the most served destination in the airline's network. With a flying distance of only 379 kilometres each way, it is the world's shortest scheduled A380 flight, operated in a 3-class configuration with 519 seats in total.

Johannesburg (South Africa) will complement Emirates' global list of A380 destinations from February 1, 2017.

By mid-December 2016 the global A380 fleet consisted of 201 commercially operated planes in service. The thirteen operators are Emirates (88), Singapore Airlines (19), Deutsche Lufthansa (14), Qantas (12), British Airways (12), Air France (10), Korean Airways (10), Etihad Airways (8) Malaysia Airlines (6), Qatar Airways (6), Thai Airways (6), China Southern Airlines (5), and Asiana (5). The number of undelivered A380 orders stood at 120.

In November 2016 Malaysia Airlines (MAS) detailed its plans to operate religious pilgrimage flights with its A380 fleet of six aircraft. According to Peter Bellew, CEO of MAS, they are in the process of setting up a subsidiary with a separate Malaysian air operator certificate and it "should be fully operational by spring 2018". "MAS is already transporting Muslim pilgrims on charter flights to Saudi Arabia very successfully and is in a good position

to cater for increased passenger demand on this route," Bellew said. The operator will be run on sharia-compliant principles, which include the use of Islamic financing instruments, but will not be restricted to Hajj and Umrah business. Bellew also sees opportunities to operate non-religious charters. Further demand might come from existing A380 operators seeking temporary increases in capacity during major overhaul events of their own fleet or for certain periods during the year. To cover all these future business opportunities Bellew suspects the initial fleet could grow to up to twenty aircraft and might also include "the largest" Boeing 777s. MAS plans to reconfigure its relatively young A380s to accommodate up to 700 passengers, a capacity increase of more than 40% compared to the 3-class configuration currently installed.

Also in November 2016 Emirates indicated that it will likely seek to extend leases on its A380s. Asked about the probability of using the aircraft beyond the 12 years the operator has typically contracted, Emirates' senior vice president of corporate treasury said "we want to keep it for a long time. The type has proven to be a flexible platform" and is a core product for the airline.

Middle Eastern carrier Emirates is to defer delivery by twelve months of 6 Airbus A380s which had been due to arrive in 2017 and 6 which had been due to arrive in 2018. The postponement follows an agreement between Emirates and Rolls-Royce, which manufactures the Trent 900 engine for the type.
